

Tegwin Pulley is a woman on a mission. Across business, civic, and educational sectors her mission is nothing short of creating environments where inspiration, opportunity, and achievement are available for all. At Texas Instruments (TI), she had a track record, which resulted in TI being recognized as one of the best companies to work for, in addition to TI winning more than 180 awards for diversity, work-life, and inclusive environment.

Tegwin has a history of building programs, enterprises, and partnerships where none existed before, including the Dallas Fort Worth (DFW) Technology Education Council and the Regional Workforce Leadership Council. Tegwin has served on more than 35 community boards and chaired 10 nonprofit organizations, ranging from the Texas Engineering and Technology Consortium to the Women's Center to the TWU Board of Regents.

Recently Tegwin retired from TI where she was vice president responsible for workforce development and diversity. She continues to provide consulting for both businesses and educational institutions, including recently serving as Executive Director of High-Tech High Heels, a program to encourage and prepare girls to pursue technology-related degrees.

Tegwin now dedicates most of her time to NAPE as Texas Director of the STEM Equity Pipeline™. She is responsible for bringing top-level leadership to the NAPE board and Business Alliance Council. With a collaborative spirit and strategic approach, she supported the successful development and deployment of NAPE's Micromessaging to Reach and Teach Every Student© training, NAPE's STEM Equity Career workshops and the High-Tech High Heels Physics Camp for girls. Her work helped hurdle NAPE forward in its mission, enabling NAPE to reach more than 700 educators in Texas in 18 months.

Diversity remains Tegwin's top priority in both her vocation and avocation. Throughout her career, she has mentored, coached, and sponsored many women and men in STEM and continues to do so. Currently, she serves on 10 boards and advisory boards including the American Institute for Diversity and Commerce and the McDonald Observatory and Leadership Women. Congratulations to Tegwin Pulley for embracing Diversity in Technology Leadership.
